Abstract: This study investigates the multifaceted challenges impeding English language acquisition in Jammu and Kashmir, highlighting the interplay of socio-economic conditions, political instability, and deficiencies in educational infrastructure. This detailed classroom observations and teacher interviews; this research elucidates the primary obstacles to effective English language learning in the state. A central focus of the study is the tension between teachers' beliefs in allowing students the time and freedom to express themselves in English and their preference for rapid progression and precise language use. This tension is exacerbated by the region's complex multilingual environment, which includes languages such as Kashmiri, Dogri, Urdu, and Punjabi. Each of these languages introduces distinct linguistic structures and phonetic systems, complicating the English language learning process. Research reveals that many schools in Jammu and Kashmir are plagued by inadequate resources, including outdated textbooks and insufficient teaching aids. A significant issue is the presence of poorly trained teachers who lack the specialized skills necessary for effective English language instruction. The predominance of Urdu as the medium of instruction in many schools further restricts students' exposure to English, hindering their language acquisition. The study also critiques the lack of focus and structure within the existing language arts curriculum. The curriculum offers insufficient guidance for teaching fundamental English-language skills and employs ineffective techniques for vocabulary development. These deficiencies contribute to the broader issue of ineffective language acquisition. Moreover, the paper explores how rigid curricula and assessment methods that prioritize rote learning over practical language use contribute to the difficulties faced by students. These traditional approaches undermine the development of essential language skills and limit the effectiveness of English language education in the region. The study underscores the urgent need for curriculum reform and enhanced teacher training to address these challenges and improve English language acquisition outcomes in Jammu and Kashmir.

Keywords: *Bilingualism, Linguistic Diversity, Phonetics, Acquisition, Curriculum, Competence.*

1. INTRODUCTION

English language acquisition is increasingly recognized as essential for global communication, higher education, and better job prospects. However, mastering English can be particularly challenging in regions like Jammu and Kashmir, which are marked by complex socio-cultural and political contexts. This region's multilingual nature—encompassing Kashmiri, Dogri, Urdu, and Punjabi—creates significant obstacles for learning English due to the marked differences in phonetic and grammatical structures. Kashmiri and Dogri, for instance, have unique phonetic systems and grammatical rules that can interfere with learning English. These differences often lead to confusion as students attempt to reconcile diverse linguistic frameworks. The Region's educational infrastructure, especially in rural areas, is often underdeveloped. Many schools lack essential resources like updated textbooks and technological tools, hindering effective English instruction. According to Copald, Garton, and Burns in their study "Teaching English to Young Learners: Global Perspectives and Local Realities," "these challenges are both global and specific to the region, reflecting widespread and localized issues in English education" (Copald, Garton, and Burns, 2014: 739).

Socio-economic factors, such as widespread poverty and the impact of ongoing conflict, further limit access to quality education. Political instability leads to frequent disruptions in schooling, exacerbating learning difficulties. For example, schools in conflict zones often face closures due to security concerns, affecting students' educational progress. Cultural and psychological barriers also hinder English acquisition. Resistance to English, due to its colonial past, and a lack of perceived benefits can negatively affect students' motivation. Many students in remote areas are deprived of basic educational tools like books and internet access, further compounding their difficulties. The rigid educational curricula and assessment methods in the region contribute to ineffective language learning. Emphasizing rote memorization over practical language skills undermines students' ability to use English effectively in real-world contexts. Rachel A. Grant and Shelley D. Wong stress "the importance of understanding the complex conditions affecting how schools educate linguistically diverse learners" (Grant and Wong, 2003: 387).

This paper aims to identify strategies to overcome these barriers and improve English education in Jammu and Kashmir. A multifaceted approach is required, including enhancing educational infrastructure, providing targeted teacher training, and revising curricula to focus on practical language skills. Increasing access to learning materials and addressing socio-cultural attitudes towards English are also crucial for improving language acquisition. Understanding and addressing these challenges is essential for developing effective strategies to enable students to benefit from English proficiency.

2. RELATED WORKS

The related works on English language acquisition, especially in diverse and challenging contexts, sheds light on the complex difficulties faced by learners and educators. This review synthesizes key findings from several significant works, emphasizing their contributions to understanding language acquisition issues in Jammu and Kashmir.

A. A. Kak's "Unpublished Doctoral Thesis on Language Maintenance and Shift" investigates how multilingual communities manage language maintenance and shift, focusing on language preservation and displacement. This research is essential for understanding the linguistic environment in Jammu and Kashmir.

J. Fyler, "Language Barriers" Fyler's article, published in *Studies in Philology*, examines barriers to effective language learning and communication, including phonetic and grammatical differences. The insights offered are relevant for understanding the challenges faced by students in Jammu and Kashmir, where local languages' disparities with English create significant learning obstacles.

S. Krashen, *Second Language Acquisition and Second Language Learning* Krashen's seminal work offers a theoretical framework for second language acquisition, including the Input Hypothesis and the Affective Filter Hypothesis. These theories are particularly useful for understanding the challenges faced by English learners in Jammu and Kashmir.

F. Mujtaba, "Empowering the Future" Mujtaba's article in *Greater Kashmir* addresses educational and socio-economic issues affecting language learning in Jammu and Kashmir. It highlights how socio-economic disparities and political instability impact access to education and resources, crucial for understanding the broader context of English language acquisition.

R. A. Grant and S. D. Wong, "Barriers to Literacy for Language-Minority Learners" Grant and Wong's study, published in *Journal of Adolescent & Adult Literacy*, explores literacy barriers faced by language-minority learners and advocates for improved educational practices. Their findings on inadequate instructional methods and resources are pertinent for analyzing barriers to English acquisition in Jammu and Kashmir.

V. Ramanathan, "English Is Here to Stay: A Critical Look at Institutional and Educational Practices in India" critically examines the role of English in India's educational system, discussing institutional and pedagogical challenges. This work provides context on how English is integrated into curricula and the associated implementation difficulties.

These works provide valuable theoretical frameworks, empirical insights, and practical recommendations for improving English language education in Jammu and Kashmir.

3. RESEARCH METHODOLOGY

This methodology combines qualitative and quantitative research methods to provide a comprehensive understanding of the obstacles to effective English language learning in this context. Research Follows:

1. Research Design

This study adopts a mixed-methods research design, integrating both qualitative and quantitative approaches to achieve a holistic analysis of the challenges in English language acquisition. The mixed-methods approach allows for a rich, in-depth exploration of the issues.

2. Data Collection

Qualitative Data Collection:

Classroom Observations:

Purpose: To observe and document the teaching practices, student engagement, and classroom interactions related to English language instruction.

Method: Structured and semi-structured observations will be conducted in various schools across urban and rural areas of Jammu and Kashmir. Observers will use a standardized checklist to record observations on instructional methods, resource usage and classroom dynamics.

Interviews with Educators:

Purpose: To gain insights into teachers' perspectives on the challenges and obstacles to English language acquisition.

Method: Semi-structured interviews will be conducted with English language teachers. The interviews will focus on topics such as curriculum issues, resource availability, training, etc.

Focus Groups with Students:

Purpose: To understand students' experiences and perceptions regarding English language learning.

Method: Focus group discussions will be held with students from different age groups and educational levels. Discussions will cover students' attitudes toward English, their learning experiences, and the perceived barriers to language acquisition.

Quantitative Data Collection:

i. Surveys:

Purpose: To gather broad quantitative data on factors affecting English language acquisition, including resource availability, curriculum effectiveness, and socio-economic factors.

Method: Structured surveys will be administered to a sample of students, teachers, and parents. The surveys will include Likert-scale questions, multiple-choice questions, and demographic information to assess various aspects of the educational environment.

Analysis of Academic Performance Data:

Purpose: To evaluate the impact of existing educational practices and resources on students' English language proficiency.

Method: Academic performance data, such as test scores and language proficiency assessments, will be collected from schools. Statistical analysis will be performed to identify patterns and correlations between educational practices, resource availability, and students' language proficiency.

Sampling

Schools:

Selection: A stratified random sampling method will be used to select schools from both urban and rural areas of Jammu and Kashmir. Schools will be categorized based on their geographical location, type (government or private), and resource availability.

Participants:

Teachers: A purposive sampling technique will be employed to select English language teachers.

Students: A random sampling method will be used to select students from different educational backgrounds to ensure diversity in the sample.

Parents and Administrators: Participants will be selected based on their roles and involvement in the education system.

Data Analysis

Qualitative Analysis:

Method: Thematic analysis will be used to analyze interview transcripts, focus group discussions, and observational notes.

Tools: Qualitative data analysis software (e.g., NVivo) may be used to assist in organizing and coding qualitative data.

Quantitative Analysis:

Method: Statistical analysis will be performed on survey data and academic performance metrics. Descriptive statistics, correlation analysis, and regression analysis will be employed to identify trends, relationships, and factors influencing English language acquisition.

Tools: Statistical software (e.g., SPSS, R) will be used for data analysis.

Ethical Considerations

Informed Consent:

Participants will be provided with information about the study's purpose, procedures, and potential risks. Informed consent will be obtained from all participants before data collection.

Confidentiality:

All data will be anonymized and treated with strict confidentiality. Personal identifiers will be removed to ensure the privacy of participants.

Approval:

The study will seek approval from relevant ethical review boards and institutions to ensure compliance with ethical research standards.

Limitations

Geographical Scope:

The study's findings may be influenced by the specific geographical and socio-political context of state, limiting the generalizability of results to other regions.

Resource Constraints:

Limited resources and logistical challenges may affect the comprehensiveness of data collection, particularly in remote or conflict-affected areas.

Response Bias:

This research methodology aims to provide a thorough and nuanced understanding of the difficulties in English language acquisition in Jammu and Kashmir by offering valuable insights to improve language education in the region.

4. RESULTS AND DISCUSSIONS

Language barriers have historically posed significant challenges to international understanding and progress. As globalization accelerates and nations become more

interdependent, the importance of overcoming these barriers becomes even more critical. Language barriers in Kashmir present a complex and multifaceted challenge, impacting various aspects of daily life, education, administration, and social integration.

For many centuries the language barrier has been a hindrance to international understanding and progress. As methods of transportation and communication improved, reducing the space and time barriers and increasing the interdependence and interaction of nations, the problem of language differences became one of increasing magnitude (Bishop, 1954: 316).

The state of Jammu and Kashmir is characterized by its geographical diversity, with five main regions: Baltistan, Gilgit, Jammu, Kashmir, and Ladakh. Each region has a predominant language: Balti in Baltistan, Shina in Gilgit, Dogri in Jammu, Kashmiri in Kashmir, and Ladakhi in Ladakh. However, this classification oversimplifies the linguistic landscape, which is far more diverse. Even though Kashmiri is a native language, English has managed to create a niche for itself. Notwithstanding the fact that Kashmiri is the mother-tongue of Kashmiris, Urdu and English are continuing as official languages, even after 33 years of independence” (Pompur, 1981: 84). These major languages represent the perceived majority but do not capture the true linguistic richness and the hybrid languages that often emerge from the intersections of different linguistic groups. Starting with the Jammu region, linguistic diversity is particularly pronounced. In the southern areas of Poonch and Rajouri, the primary language is Poonchi, also known as Pahari or Potohari. This language is part of the Lahnda/Punjabi family within the broader Indo-Aryan languages. Moving eastward, we encounter Dogri, a language that shares many similarities with Punjabi and was once considered a dialect of Punjabi. Today, Dogri is recognized as an independent language within the Western Himalayan Pahari language group. Its evolution reflects the region’s complex linguistic history and the influence of neighboring languages. Jammu and Kashmir’s linguistic landscape is a tapestry of languages and dialects influenced by geography, history, and cultural interactions. While each region has a predominant language, the true linguistic picture is much more complex, reflecting centuries of intermingling and mutual influence.

Jammu and Kashmir’s linguistic landscape is complex and varied, presenting unique challenges for English language learners. The region is home to multiple languages, including Kashmiri, Dogri, Urdu, and Punjabi, each with its distinct phonetic and grammatical systems. In 2003, the government made a change over from Urdu as a medium of instruction to English. Attitudes and views of Kashmiris regarding English, Kashmiri and Urdu have also undergone a gradual change, with English speakers being stereotyped highest in the most relevant attributes indicating what English proficiency indicates for Kashmiris” (Kak, 2002).

This diversity can make it difficult for learners to acquire English, a language with a markedly different structure. John Fyler in his seminal work comes up with instances, “of the linguistic division as they turn into rigid language barriers...” (2015: 417). English is an important language in Kashmiri society since it is used widely in commerce, education, and communication. In an article published in Greater Kashmir Farooqa Mujtaba, Educator at Birla Open Minds International School Pampore sagaciously points out that: “It’s time to recognise the importance of linguistic diversity in Kashmir and to celebrate the role of English alongside other languages spoken in the region”. Understanding the origins and importance of the English language highlights its relevance in Kashmir. This underscores the

necessity of valuing linguistic diversity while recognizing the enduring significance of English.

Phonetic Challenges

The acquisition of English in Jammu and Kashmir is fraught with numerous phonetic challenges due to the region's rich linguistic diversity. Local languages such as Kashmiri, Dogri, Urdu, and Punjabi each present distinct phonetic systems that complicate learners' efforts to achieve fluency in English. This section explores these phonetic difficulties, examining the root causes, specific problem areas, and potential strategies for overcoming these hurdles. The linguistic diversity in Jammu and Kashmir means that learners come from backgrounds with varied phonetic systems. Each local language has unique sounds, intonation patterns, and phonological rules that can differ significantly from English.

Kashmiri, an Indo-Aryan language spoken primarily in the Kashmir Valley, features a distinctive set of phonetic elements. It includes retroflex consonants such as /ʈ/, /ɖ/, /ɳ/, and /ʂ/, which are produced with the tongue curled back against the roof of the mouth. These retroflex sounds contrast sharply with English's dental and alveolar sounds. For example, Kashmiri's /ʈ/ is a retroflex plosive, whereas English's /t/ is an alveolar plosive. This difference creates a unique acoustic quality in Kashmiri, which can be challenging for speakers when learning English, leading to noticeable mispronunciations. Conversely, English includes fricative sounds like /θ/ (as in "think") and /ð/ (as in "this"), produced by forcing air through a narrow channel formed by the tongue against the teeth. Kashmiri lacks these interdental fricatives, making it difficult for native speakers to produce them accurately. As a result, Kashmiri speakers might substitute these sounds with /t/ or /d/, leading to common mispronunciations.

The vowel systems in Kashmiri also differ significantly from English. Kashmiri features a range of vowel sounds and diphthongs (complex vowels formed by gliding from one vowel to another), including vowels like /i/ that do not have direct English equivalents. These differences complicate the approximation of English vowel sounds for Kashmiri speakers. Furthermore, the phonetic rules governing sound combinations in Kashmiri differ from those in English. For instance, Kashmiri allows certain consonant clusters and sound sequences not present in English, leading to difficulties in pronunciation when transitioning between languages. Intonation patterns in Kashmiri also differ from English. Kashmiri may have a more tonal quality where pitch variations can alter word meanings, whereas English relies more on stress and intonation to convey meaning. These differences can result in misunderstandings and communication difficulties, as the expected patterns of emphasis and pitch in English may not align with Kashmiri speakers' expectations.

Dogri, another Indo-Aryan language, shares some phonetic features with Punjabi. Both languages include tonal variations, which English lacks. Dogri speakers may struggle with English consonant clusters, as Dogri typically avoids complex clusters. For example, English words like "street" or "spring" might be pronounced with added vowels or simplified to fit Dogri's phonetic patterns, leading to pronunciation errors. Urdu is used as a medium of instruction in many schools, has a phonetic system with aspirated and unaspirated consonants that are not as prominent in English. Urdu speakers often have difficulty with English vowels because Urdu has fewer vowel distinctions. This can result in confusion between similar-

sounding English words, such as “ship” and “sheep.” Punjabi, like Dogri, features tonal aspects and lacks some English sounds. Punjabi speakers might find English diphthongs and certain consonant clusters challenging. Mispronunciations among Punjabi learners include “pleet” for “plate” and “istreet” for “street,” reflecting the influence of Punjabi phonetic patterns.

To address these phonetic challenges, several strategies can be employed: Providing targeted phonetic training that focusses on the specific sounds and sound patterns of English can help learners from diverse linguistic backgrounds. This includes exercises that emphasize the production of difficult sounds, such as retroflex consonants and interdental fricatives. Utilizing visual aids, such as diagrams and videos that illustrate tongue positions and airflow, can help learners understand and replicate the correct pronunciation of English sounds. Incorporating targeted practice with challenging sounds into language lessons can assist learners in overcoming pronunciation difficulties. This practice can involve repetition drills, minimal pairs exercises, and corrective feedback. Educators should foster an awareness of phonetic differences and promote empathy among learners. Understanding the unique challenges faced by speakers of different languages can lead to more effective and patient teaching methods. By appreciating and addressing the phonetic distinctions between Kashmiri, Dogri, Urdu, Punjabi, and English, educators can better support language learners in achieving proficiency and confidence in English.

Common Pronunciation Challenges

The phonetic discrepancies between English and the native languages of Jammu and Kashmir lead to several specific pronunciation challenges. The first one is consonant clusters (groups of consonants without intervening vowels), which are less common in the local languages of Jammu and Kashmir. Words like “strength,” “clasp,” or “splendid” can be particularly challenging. Students might insert extra vowels (e.g., “esplendid” instead of “splendid”) or drop consonants (e.g., “stren” instead of “strength”) to make these clusters easier to pronounce. In the same way, English has a larger inventory of vowel sounds compared to Kashmiri, Dogri, Urdu, and Punjabi. For instance, English differentiates between /i:/ (as in “sheep”) and /ɪ/ (as in “ship”), whereas local languages may not make such distinctions. This can lead to mispronunciations and misunderstandings. Learners often struggle with vowel length and quality, resulting in errors that can change the meaning of words.

Intonation, the rise and fall of pitch in speech, plays a crucial role in English to convey meaning, emotion, and grammatical structure. The intonation patterns in English are different from those in Kashmiri, Dogri, Urdu, and Punjabi. English often uses rising intonation for questions and falling intonation for statements, which may not be intuitive for learners whose native languages follow different intonation rules. This can lead to speech that sounds unnatural or is difficult to understand. Certain English phonemes are particularly troublesome for learners from Jammu and Kashmir. The ‘th’ sounds (/θ/ and /ð/), as in “think” and “this,” are often replaced with /t/ or /d/ sounds, leading to pronunciations like “tink” instead of “think” and “dis” instead of “this.” Similarly, the /v/ and /w/ sounds can be confusing, with learners often pronouncing “vine” and “wine” the same way.

The phonetic challenges faced by English learners in Jammu and Kashmir are significant but not insurmountable. The diverse phonetic systems of local languages such as Kashmiri,

Dogri, Urdu, and Punjabi pose specific pronunciation difficulties that require targeted teaching strategies. Through explicit phonetic training, auditory discrimination exercises, repetition, and the use of technology, students can improve their pronunciation and achieve greater fluency in English. Additionally, cultural sensitivity, motivation building, and peer learning play crucial roles in addressing these challenges. By implementing these comprehensive strategies, educators can help students overcome phonetic barriers and enhance their English language acquisition in this linguistically rich and diverse region.

Vocabulary and Semantic Differences: Vocabulary acquisition is another area where linguistic diversity poses challenges. Many English words have no direct equivalents in local languages, requiring students to learn new concepts along with the words. Additionally, idiomatic expressions and phrasal verbs in English can be particularly confusing for learners who are not familiar with these linguistic constructs in their native languages. This aspect of language learning demands a focused approach, incorporating contextual learning and practical usage.

Educational Infrastructure: The educational infrastructure in Jammu and Kashmir, especially in rural areas, is often inadequate to meet the needs of effective English language instruction. Many schools suffer from a lack of basic resources, including textbooks, teaching aids, and proper classroom facilities. This lack of resources is compounded by a shortage of trained teachers who are proficient in English.

Resource Constraints

The education system in Jammu and Kashmir, like in many regions around the world, faces a variety of challenges that impede effective language learning. Among these, resource constraints stand out as a significant barrier to acquiring proficiency in English. English language learning, which relies heavily on up-to-date materials and engaging teaching methodologies, is particularly vulnerable to the limitations imposed by inadequate resources. David O. Allen elaborately talks of resource constraints in his *The State and Prospects of the English Language in India*. This is to a great extent true of the overall status of Jammu and Kashmir:

the people of India generally have not so many means and opportunities of acquiring a knowledge of the English language in connection with the Government, or in matters of business, or in social intercourse, as might be naturally expected and have been generally supposed (1854: 268).

One of the primary issues is the reliance on outdated and scarce textbooks. Textbooks play a crucial role in structured learning, providing the backbone of the curriculum and guiding both teachers and students through the learning process. In many schools in Jammu and Kashmir, textbooks are not only outdated but also often in short supply. Outdated textbooks may contain archaic language and cultural references that are no longer relevant, failing to engage students or provide them with the language skills necessary for contemporary communication. Furthermore, the scarcity of textbooks means that students might have to share or go without, severely limiting their ability to study independently and reinforce what they have learnt in class. Modern teaching methodologies emphasize interactive and student-centred learning, which requires materials that can support a variety of teaching approaches. However, many of the available textbooks in Jammu and Kashmir do not align with these

modern pedagogical strategies. Traditional rote learning, which these textbooks often promote, does not cater to the development of critical thinking, creativity, and communicative competence in English. Without resources that support interactive activities, group work, and practical language use, teachers are constrained in their ability to implement more effective teaching methods. This misalignment results in a learning environment that is less dynamic and engaging, making it harder for students to develop a strong command of the English language. As a result of this, “Teachers ... find themselves teaching English either without adequate training in teaching young learners in general or in teaching English to young learners in particular. The situation is especially acute in poor or rural areas (Copland, 739-40).

The role of multimedia resources in language learning cannot be overstated. Audio-visual aids, such as language labs, interactive software, videos, and audio recordings, are essential for developing listening and speaking skills, which are critical components of language proficiency. In Jammu and Kashmir, many schools lack these multimedia resources due to financial constraints and infrastructural limitations. Without access to audio-visual aids, students miss out on opportunities to hear native speakers, practice pronunciation, and engage in interactive learning experiences. This absence significantly hampers their ability to improve their listening and speaking skills, which are essential for real-life communication in English. The lack of a supportive learning environment, compounded by outdated materials and the absence of multimedia resources, has a profound impact on students’ progress in acquiring English.

Despite this conception of the interdependence of language development, cognition, and instructional collaboration with adults, teachers of English learners have been told for more than a decade that their role in the second language acquisition process is a largely passive one of providing comprehensible input (Krashen, 1981).

Students in resource-constrained settings often exhibit lower levels of motivation and engagement. When learning materials are not stimulating or relevant, and when interactive, communicative methods are not used, students may perceive English as a difficult and uninteresting subject. This perception can lead to a lack of enthusiasm and effort, further impeding their language acquisition. Moreover, without adequate resources, teachers are also limited in their professional development and ability to innovate in their teaching. They may struggle to provide effective feedback, design engaging lessons, or create a classroom environment that fosters active learning. This limitation affects the overall quality of education, making it challenging to meet the diverse needs of learners.

Effective language instruction hinges on comprehensive teacher training. It is a cornerstone often overlooked in regions like Jammu and Kashmir. Many teachers in this area have not received sufficient training in teaching English as a second language, leading to suboptimal teaching methodologies that fail to address the unique challenges faced by English learners. This deficiency stems from multiple factors, including a lack of proficiency in English among teachers themselves, insufficient professional development programs, and inadequate classroom management strategies. To improve the quality of English language education, it is essential to focus on enhancing teacher training, reducing student-teacher ratios, and implementing effective classroom management strategies. Teacher training is fundamental to the success of any educational program, particularly in the context of language instruction.

Effective training programs equip teachers with the necessary skills and knowledge to deliver high-quality instruction, tailored to the needs of their students. In Jammu and Kashmir, many teachers lack the requisite training in English as a second language, which adversely affects their ability to teach effectively. Without proper training, teachers may resort to traditional, lecture-based methods that do not engage students or promote active learning.

Another significant challenge in the region is the high student-to-teacher ratio in many schools. Large class sizes make it difficult for teachers to provide individual attention to students who may be struggling with English. Personalized instruction and feedback are crucial for language learning, as they allow teachers to address specific student needs and correct errors promptly. In overcrowded classrooms, these opportunities are limited, leading to a lack of personalized instruction and insufficient practice in speaking and receiving feedback. Vai Ramanathan revealed that “certain institutional and teaching practices keep English out of the reach of lower income and lower caste groups and push them into outer circles” (1999: 211). Addressing this issue requires a multifaceted approach. Firstly, hiring more teachers is essential to reduce the student-teacher ratio. This would enable teachers to manage their classrooms more effectively and devote more time to individual students. Secondly, implementing classroom management strategies that facilitate effective language learning in large groups can also make a significant difference.

5. CONCLUSION

English language acquisition in Jammu and Kashmir is fraught with multifaceted challenges that stem from socio-political instability, inadequate educational resources, linguistic diversity, socioeconomic disparities, and a cultural emphasis on local languages. The region’s political unrest frequently disrupts consistent schooling, leading to irregular attendance and a lack of continuous, structured learning. This instability is a significant barrier to acquiring proficiency in English, as consistent practice and instruction are crucial for language development. The educational infrastructure in Jammu and Kashmir is often inadequate, with many schools lacking modern facilities, up-to-date materials, and access to technology. These deficiencies hinder effective learning and limit students’ exposure to the English language. Additionally, the scarcity of well-trained English teachers exacerbates the problem, as students do not receive the necessary guidance and support to navigate the complexities of the language.
